Pop goes the Bush mythology bubble

Part 5: Exploding the myth of the Bushes as an all-American family

By Karl W. B. Schwarz

Online Journal Contributing Writer

February 2, 2005—The Bushes are many things, but an All-American family they are not. There is something fundamentally wrong with these people and it goes past elitism and just basic snobbery. They might have “Oil on the Brain” to the point they are not even very human any more and we already know they are not *humane* at all.

They like to market “*points of light*” while they are lying to us and out snuffing out points of light all over the globe, especially those that could expose the sleaze that the family has come to represent. Now that Bush cannot find any WMD he likes to point to the “mass graves” without elaborating that about three of every five of those 500,000 dead Iraqis got into those mass graves when George H.W. Bush urged the Shiites and Kurds to rise up in 1991-1992 against Saddam and Bush 41 stood idly by while 300,000 or so of the 500,000 “excuse graves” were being filled, and now George W. points to them as a good reason for the invasion of Iraq.

Back during the Reagan Administration, [Neocons Cheney, Rumsfeld, Bush, George Shultz, Bechtel and others dreamed up a scheme to take over the Iraqi oil and install the Agaba Pipeline](#). That matter lay dormant until April 11, 2003, when New York Times columnist Bob Herbert contacted Jock Covey, director of external communications (a euphemism and high-sounding title for “spin doctor”) at Bechtel. [A recent piece written by me addressed that Agaba Pipeline](#) and the fax Covey sent to Shultz to spin the response to Bob Herbert and the article he was writing and that appeared in print on April 14, 2003.

Mr. Covey’s name comes up again in the next Part VI article, as does 9-11 Commission member John F. Lehman—so please pay attention.

We have been told by the Bush administration that American Airline Flight 77 was flown into the Pentagon by a “crack pilot” who was a marginal car driver. Hmm, I did not buy that story for even a second. That the Pentagon fire was so hot it vaporized most of a 60-ton airplane including cobalt jet engine parts that would not evaporate in the temperatures of a normal building fire, but they got enough human DNA to prove who was on the flight. Hmm, if it were hot enough to melt a plane including a cobalt heat resistant jet engine, human DNA recovery would have been impossible so I don’t buy that fable either.

So, how do we prove that the “*Official Bush Story*” is actually the “*Official Bush Lie?*”

That has not been easy and we have had many working on this night and day for three years to get to the bottom of the matter.

After the Pentagon attack, the video cameras and tapes at a nearby CITGO, the Sheraton Hotel along I-395 and Virginia DOT cameras were all confiscated by the FBI and they have yet to disclose any of the contents that were recorded by those cameras. Those cameras would have recorded what came in to hit the Pentagon and if viewed by the public, all the world would know that it was not a Boeing 757, American Airlines Flight 77, as we were told. All the world would know that Bush’s assertion is in fact a huge lie.

They cannot disclose those tapes without indicting themselves that it was the U.S. government and select "private sector outsourcing" that did the alleged terrorist attacks of 9-11. In short, our government would have to admit that it is al Qaeda and that this GWOT (Global War on Terror) is fabrication made up to provide excuses for a despicable U.S. energy and war policy.

The post-attack cleanup at the Pentagon shed some light on the fact that it was not a 757, but exactly what the part recovered was has not been easy to find or locate.

It is not a "turbofan" component, it is in fact a "turbojet" component from an US Air Force/Navy vintage type of jet engine technology that was used on just a limited number of fighters, bombers and reconnaissance planes.

There was one credible witness found that saw "*a two-engine jet airplane, the engines were under the wings.*" That is a visual description of a 737, 757, or 767, but it is also a description of an A-3 Skywarrior.

Pentagon Turbofan

WagKingdom.com

Is this really a 757 engine disc, either RB 211 or Honeywell APU?
Or is it instead from the engine of a smaller plane or missile?

Pentagon Turbofan Composite made from FEMA Photo Archive
As highlighted by Eric Hufschmid and Christopher Bollyn (AFP)

By their own admission and website advertising propaganda, [Praxair Surface Technologies](#) is the only company FAA certified to work and rehabilitate worn out or corroded components of the Pratt & Whitney JT8D turbojet engine in question.

**P&W JT8D Front Compressor
Front Hub Assembly**
Engine Models:
JT8D All Models including -200 C1
and JT8D Standard C1, C2

“Your reliable source for Turbine Engine Fan Blade repairs is now providing total overhaul capability of JT8D Fan Hub Assembly repairs. Praxair is the only approved source to overhaul both blades and hub assemblies.”

For those of you that do not pay attention to such things, 9-11 Commission member Jamie Gorelick sits on the board of directors of United Technologies and [Pratt & Whitney is now owned by United Technologies](#). Former Bush EPA secretary Christine Todd Whitman also sits on the United Technologies board, and that is a company that is raking in big bucks due to Bush War Policy.

The front fan hub and compressor assembly of the Allison J33, J71 (now owned by Rolls Royce), and the Pratt & Whitney J57 and Pratt & Whitney JT8D as shown above are all fairly similar but they also have something else in common. There was just one conflict of interest on top of another on that 9-11 Omission Commission.

The bent out of shape piece shown on the FEMA photos is the front shaft bearing housing. What you are seeing above is a “balance test assembly,” since jet engines do spin fast and have to be very accurately balanced. Jet engines do in fact have a “center shaft” and it must be balanced and it must have bearing seals front and back. The FEMA photo shows such a front seal and a rotor hub missing its fan blades. The key is the cleats on the outer perimeter that the fan blades attach to and these particular blades are easy to knock off in a collision such as that at the Pentagon.

The roll of masking tape in the background will give you an idea of scale, and then compare to the A-3 photos and the much larger fan needed for the 757 type of high bypass jet engine. In short, the Pentagon part is not from a 757, period.

Some of the team kept digging and they finally found what might be the actual type of part that was at the Pentagon. The part that is visible in the left of this photo could well be the exact part, and I can assure all that what you are looking at is not the front fan of a 757 jet engine. That is a 737 type of “turbojet” power plant and might well be in the “modified A-3 Skywarriors.” I bet that jet mechanic from Evergreen Air (a known CIA affiliated company) can tell us where that fan blade comes from and do so in front of a Spitzer or Morgenthau grand jury.

There is the “mystery part” and no, it is not part of a 757 jet engine and never has been. Oops!

They are all jet engine components (past and present) on the A-3 Skywarrior twin-turbojet airplane and on older versions of the 737. The USAF only has a few of the A-3s left in operation and what was formerly Hughes Aircraft, now Raytheon, has a fleet of them at Van Nuys, Calif. This type of turbojet engine has never been used on a Boeing 757, so the debate on “type of plane” can end there. This is a jet engine component with fan, not an auxiliary power unit (APU) as some have speculated or dropped into the conversation as *disinformation*.

What has been interesting is the level of “content blocking” that there is on the Internet where specific information regarding certain “jet engine components” such as those shown at the Pentagon have definitely been blocked. Our team had to take steps to go around the content blocks to get at the photos you are seeing regarding these rotor hub components.

That part has a specific UPN (Universal Part Number) and it cannot be found by looking for that UPN. Other measures were needed to find what you are seeing in these photos to circumvent what is apparently *intentional content blocking*. Someone has gone to considerable lengths to make sure that the actual components that were found at the Pentagon could not be found and it took my team over two years to hammer through such blocks to find three of these photos (Praxair and Evergreen) to verify the component.

Yes, Hughes aircraft had a fleet of them and was bought out by Raytheon. Hmm, that company is doing well for two reasons that I know of due to Bush war policy and even the move from Mode 4 to Mode 5 technology since the PRC got its hands on our top secret Mode 4 technology with that little Hainan Island incident and our Navy EP-3 that was forced down in April of 2001. As of Sept. 11, 2001, most air traffic controllers and National Air Guard units were not upgraded after the PRC got their hands on some of our most sensitive military technology.

Just stop and consider, if we can attack other nations with impunity and at will, we can attack ourselves too and cloak it from commercial operations just like we do in other nations.

The above photo is a launch of an AIM-54 Phoenix Missile, air-to-air missile. Making this launch an air-to-surface missile would not be a great feat and Hughes/Raytheon manufactures several such missiles that would blow a 16-foot diameter hole in the Pentagon with ease.

Type: AGM-65B (Air Force), AGM-65D (Air Force), AGM-65E (Marines), AGM-65F (Navy), AGM-65G (Air Force).

Contractors: Hughes Aircraft Co., Raytheon Co.

Propulsion: Thiokol TX-481 solid-propellant rocket motor (hint – burns white and leaves a white smoke trail at all altitudes and jet engines do not do that)

Service: Air Force, Marines, Navy

First Flight: 1984

IOC: 1994

This type of air-to-ground missile (AGM) is what is used to hit buildings and blow big holes in them, like the 16-foot diameter hole in the Pentagon. Note that 737s and 757 do not come equipped with such fire control systems or the mounting pods for the missiles, however, the A-3 Skywarrior is built to support the firing of such systems. The photo below of a modified A-3 landing clearly shows the missile-launching platform under the wing.

As you can tell from the above photo the A-3 Skywarrior is already configured for the AIM and AGM missiles and another hint is the change from the older nose design to the F16 nose design which includes "fire control systems" and a few other high tech devices.

Also note that jet engine fuel burning does not leave a white trail at sea level, only at higher and much colder altitudes. However, AGM type missiles burn solid rocket fuel and it leaves a white trail at all altitudes.

If you have seen the Pentagon photos that have been released regarding the jet engine part inside the Pentagon, the following is also a photo that is not part of a 757 engine that we have found, even in physically inspecting one inside a jet engine maintenance shop.

This following part is also not a 757 component; it is a component from the types of “dual chamber” turbojets represented by the Allison J33, J71, Pratt & Whitney J57 and JT8D.

They are called in the jet industry a “[diffuser case](#)” and the UPN content numbers on this particular item have been blocked and otherwise scrubbed on the Internet.

However, the following is the diffuser case design for the 757 jet engines and it is quite different from that shown at the Pentagon. That is due to the difference between "dual-chamber turbojet" versus the newer "high bypass jet fan" designs found on the 757 and 767 jet airplanes.

Note the triangular bezels around the openings and then note that the Pentagon diffuser case has no such openings or reinforcing points. The diffuser is built into a much larger component and not a separate component in the newer 757 type jet engines. This is a very large component within the 757 type of jet engine and there are two of them on every 757. Note, not a single one of these was found at the Pentagon and this is not a component that would have melted or evaporated in any manner at all.

Another component was found at the Pentagon in the form of a wheel hub. It did not take much to confirm that the particular wheel shown below is the type made by B.F. Goodrich in their aerospace division. They also made the wheels for the 757 but a simple proportional check of width versus diameter will easily show that the below photo is not of a wheel hub from a 757, which has a much larger radius than width. This radius being about the same as the width of the wheel hub is also another clue that the 757 story is a Bush Lie.

In fact, if one looks very closely at the diameter versus width of the tire that was found at the Pentagon, this is the type of tire used for carrier based and general rear wheels of smaller military planes, not commercial airliners. This is the type of wheel hub one would expect to find as one of the two rear wheels on an A-3 refitted with current equipment rather than equipment that is no longer being manufactured.

The information in this article has been hand-delivered to New York Attorney General Eliot Spitzer.

This entire “American soldiers blood for oil” formula the Bush Family has stuck in their heads is about the lowest thing I have ever seen. Most Americans notice that they care not a bit, a common characteristic for *nitwits*, about the death and maiming of our soldiers or how many bogus enemies they are killing in the process. All they think about is oil and money, influence pimping and looking good for the cameras, while behind the scenes is a draconian and Machiavellian attitude towards all Americans that do not fit the Bush Family standards of wealth and elitism.

Ever wonder why this family seems to think sending people to die is just “another day at the office?” I wondered about that too and as I assembled [One-Way Ticket to Crawford, Texas](#) the answer became plenty clear to see. If one is not a wealthy snob like them, it just doesn’t matter if a person comes home dead, or alive, or maimed just as long as the big bucks keep flowing to the Bush Family and the Bush Cabal members (i.e. their wealthy elite friends).

Didn’t you get the memo? This is all about the greater glory of the Bush Family and Big Oil and Big Military. They are better than other Americans. Don’t believe me; just ask them. They and their friends think they can attack this nation and walk off scot-free and richer due to all of the chaos and plunder they created for Big Oil, Big Defense and Homeland Security expenditures that are mostly for their friends, not for you or me.

They do not see anything wrong at all with being so arrogant or despicable that they use military force when they and their commercially abusive “Financial Terrorist” friends cannot get certain foreign nations to do business with them. It does not seem to occur to them that “good US policy” might go a long way towards other nations wanting to do business with the U.S. and the “friends” they send over there to do such deals.

There is a big difference in an “insurgent enemy” and someone shooting at us because the Bush Family and their friends are thieves. If this were the 1800s, the Bush Family would be lynched and strung up in “*hang em high*” fashion for “*rustling*” what belongs to others.

Please sign the [Justicefor9-11.org](#) petition if you too demand the truth and justice regarding September 11, 2001. There is much truth to be found and we have a national capital that is filled with people that have an aversion to the truth. It is time that we as American citizens get to the bottom of what they fear so much and why they fear the truth. Also, [sign the Sibel Edmonds petition](#), so that we can all know what names surfaced in what she translated at the FBI.

It is time for all Americans to wake up. Both of those petitions should have millions of signatures but Americans are asleep at the switch, wheel, TV, whatever.

It is time for the truth to be on the table for all to see. You can trust that you will not like the truth when you finally see them for what they are.

I do not buy their mythology because they are flat out lying to all of us. You can suffer that in silence or do something about it.
